

# 4Kam Sports Cameras

## Description

Your high quality sports camera is designed for good performance in all conditions, with care 4Kam will provide long life and superb shots.

A swivel bracket is included to mount the camera which is ideal for use on many surfaces such as metal or plastic. Alternatively there are a number of other mounts available from our website such as our Suction Mounts, Super Velcro Tape or even a custom Roll Bar Mount made to your required size.

## Setup

Connect the female video out from the camera (RCA) to the video RCA on the av cable attached to your 4K DVR (or other recording device). Connect the supplied battery clip to the black power input on the camera. Load the battery box with 8 good batteries (not supplied) and attach to the clip.

## Useful Information

In order to retain a high quality image your 4Kam is designed to revert to a black and white picture in low light conditions, this is normal. You may also experience a b/w picture in regular light if the batteries are low on power. Replacing the batteries will enable the camera to work in colour again.

A range of alternative power supplies are also available from the website including a 12v power cable which allows you to power the camera from your bike/vehicle.

## Safety Precautions

Do not aim camera at the sun or reflective surface that could create glare.

Do not open the lens cover as this may void warranty.

Do not drop the camera or subject it to excessive shocks

## Website
